## ATTACH conclusie en discussie

- PLTs in plasma
  - Langer bewaren geassocieerd met lager risico bacteremie
- PLTs in PAS
  - Geen associatie bewaarduur en bacteremie
- Geen associatie bewaarduur en bacteremie na 2 of 3 dagen
- Verschillend effect PAS en plasma
  - Effect modificatie door bewaarvloeistof?
  - Power?

## Conclusie en discussie

- SCANDAT: 6-7 dagen bewaren is veilig mbt risico bacteremie
  - 1 oude transfusie → lager risico bacteremie de volgende dag
- ATTACH: langer bewaren verlaagd risico
  - Oud 5-7 dagen
  - Selectie: “single storage time” → vaak 1 transfusie
- Stabiele, niet bloedende patienten?
- 2 methodes, 2 cohorten, zelfde resultaten
  - Auto-sterilisatie?
  - TRIM?
